# IF100 Sequences - Practice #2

#### Introduction

The aim of this example is to practice the sequences in Python.

# **Description**

In distance learning, a university added Satisfactory(S)/Unsatisfactory(U) options to their grading system and asked you to write a Python program that takes the following three (3) information as inputs, regarding a particular student:

- 1. Names of the courses that were taken by the student in the previous semester(s), together with their corresponding letter grades, in a predetermined format
- Names of the courses that are being taken by the same student in the current semester, together with their corresponding letter grades, in a predetermined format
- 3. Name of the course, for which the grade will be checked

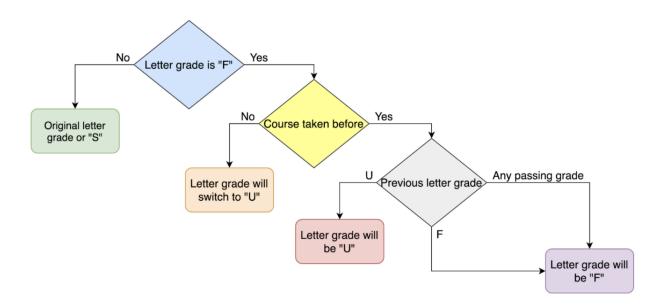

By using the course name given by the student and the letter grade information, your program then should calculate if the student will be able to choose between S and the letter grade, or if the student's grade will be U or F.

Originally, letter grade options for courses are; A, A-, B+, B, B-, C+, C, C-, D+, D, and F, where F is the failing grade. However, the university wanted to give their students the option to prevent their GPAs from being affected in a negative way due to the pandemic conditions by choosing the Satisfactory(S) option if they manage to get a passing grade; in other words, a grade other than F.

Students can take a course multiple times. In this respect, the letter grade options that the students will receive differ according to both the previous grade and the current grade of a particular course. Please follow the items listed below, or the flowchart given on the next page, for further details.

- If the current grade of a course is something other than F, students can keep their letter grade or they can choose the S grade.
- If the current grade of a course is F, and

- if the student is taking this course for the first time, then the student's final grade will be U, <u>or</u>
- if the student has taken this course before, then your program should check the previous course grade of this student.
  - If the previous grade is U, then the student's final grade should remain as U.
  - Otherwise, the student's final grade will be F.

# **Inputs, Input Checks**

The inputs of the program and their order are explained below. <u>It is extremely important to follow this order with the same characters since we automatically process your programs</u>. *Thus, your work will be graded as 0 unless the order is entirely correct*. Please see the "Sample Runs" section for some examples.

The prompts of the input statements to be used have to be exactly the same as the prompts of the "Sample Runs".

Here is the detailed information on the inputs and the input checks:

• Courses that were taken in the previous semester(s) - previous courses list <u>Format</u>: course1:grade1;course2:grade2;...;courseN:gradeN

#### i.e. "MATH101:A-;SPS101:b;IF100:B+;HIST191:s"

- Colon (":") is used between each one of the course names and letter grades. First comes the course name, and after the colon, there comes the letter grade. The length of the course name can be anything. Therefore, you cannot make any assumption on the course name length. For example, the course name can be "MATH101" or "IF100" or "CS5008", whose lengths are 7, 5, and 6, respectively.
- Semicolons (";") are used between course name and letter grade pairs.
- The user may enter extra colons (":") and/or semicolons (";") within the input mistakenly. Thus, your program should check if the number of colons is 1 (one) more than the number of semicolons. If not, your program should display an error message and terminate. You may assume if the input is given with additional colon and/or semicolon characters, then "colon count = semicolon count + 1" equality will be broken.
- Letter grades are case-insensitive, which means that some of the letter grades could be entered in upper-case, whereas some of them could be entered in lower-case. However, you may <u>assume</u> that the users will always enter a valid letter grade. That is, the user will not enter a letter grade except for A, A-, B+, B, B-, C+, C, C-, D+, D, F, S, U and their lowercase versions.
- You may also <u>assume</u> that the course names will consist only of capital letters and digits.
- The number of course name and letter grade pairs is not fixed, and there is no predefined or pre-assumed order in this input, either with respect to the letter grades or to the course names.
- You may <u>assume</u> that there won't be any duplicated course names, no spaces, or any other characters within this input.
- You may check Sample Runs, for more examples. However, please <u>keep in mind</u> that sample runs may not cover all possible cases mentioned in this document.

• Courses that are being taken in the current semester - current courses list <u>Format</u>: course1:grade1;course2:grade1;...;courseN:gradeN

i.e. "MATH102:a-;SPS102:B;CS201:b+;HIST192:a"

- o Rules and details are the same as above.
- Again, you may check Sample Runs for better understanding.
- Course name to be searched course name Format: coursename
  - To calculate the final grade or grade options, the student should be currently enrolled in the course given as coursename. Thus, your program should initially check if coursename exists in the current course list. If not, the program should print an appropriate error message and terminate.
  - o If *coursename* exists in the *current course list*, then your program should continue as explained in the description part. You may check the flowchart above for a better understanding.
  - You may <u>assume</u> that all course names will consist only of capital letters and numeric code in string format.

# **Output**

If the user enters an invalid input, then your program should display an error message saying "Invalid input", and if the *coursename* does not exist in the *current course list*, then your program should display an error message saying "You didn't take *coursename* this semester." In any erroneous case, your program should terminate after displaying the message and *without taking any further inputs* or *without displaying any other results*.

If the student's grade to be displayed is F or U, then the format of the output will be "Your grade for *coursename* is F." or "Your grade for *coursename* is U.".

If the student's current grade is anything other than F, then the format of the output will be "You can choose between S and current\_grade for coursename.".

You may check the "Sample Runs" section given below for some examples.

## **Sample Runs**

Below, we provide some sample runs of the program that you will develop. The *italic* and **bold** phrases are inputs taken from the user. <u>You have to display the required information in the same order and with the same words and characters as below.</u>

### Sample Run 1

Please enter the courses you have taken previously with letter grades: MATH101:a;SPS101:B;CS201:B+;HIST191:D;CS204:f;;CS210:S
Invalid input

### Sample Run 2

Please enter the courses you have taken previously with letter grades: MATH101:A;SPS101:B;CS201:B+;HIST191:D;CS204:F;CS210:S:
Invalid input

#### Sample Run 3

Please enter the courses you have taken previously with letter grades: MATH101:A;SPS101:B;CS201:B+;HIST191:D;CS204:F;CS210:S

Please enter the courses you have taken this semester with letter grades: CS210:F;CS206:F;MATH203:C;HIST191:F;CS204::F

Invalid input

#### Sample Run 4

Please enter the courses you have taken previously with letter grades: MATH101:A;SPS101:B;CS201:B+;HIST191:D;CS204:F;CS210:S

Please enter the courses you have taken this semester with letter grades: CS210:F;;CS206:F;MATH203:C;HIST191:F;CS204:F

Invalid input

#### Sample Run 5

Please enter the courses you have taken previously with letter grades: MATH203:C;HIST192:A;CS201:A-;CS210:C

Please enter the courses you have taken this semester with letter grades: MATH203:C;HIST192:A;CS201:A-;CS210:C

Please enter the course you want to check: CS408

You didn't take CS408 this semester.

#### Sample Run 6

Please enter the courses you have taken previously with letter grades: MATH101:a;SPS101:B;CS201:B+;HIST191:D;CS204:F;CS210:c-Please enter the courses you have taken this semester with letter grades: CS210:a-;CS206:F;MATH203:a;HIST191:F;CS204:f

Please enter the course you want to check: CS204

Your grade for CS204 is F.

### Sample Run 7

Please enter the courses you have taken previously with letter

 $\texttt{grades:} \ \textit{MATH101:A;SPS101:b;CS201:B+;HIST191:D;CS204:F;CS210:u}$ 

Please enter the courses you have taken this semester with letter

grades: CS210:F;CS306:b+;MATH203:C;HIST192:F;CS204:b
Please enter the course you want to check: CS210

Your grade for CS210 is U.

### Sample Run 8

Please enter the courses you have taken previously with letter

grades: MATH101:A; SPS101:B; CS201:b+; HIST191:D; CS204:F; CS210:A-

Please enter the courses you have taken this semester with letter

grades: CS306:F; MATH203:C; HIST192:c-; CS201:F

Please enter the course you want to check: CS201

Your grade for CS201 is F.

#### Sample Run 9

Please enter the courses you have taken previously with letter

grades: MATH101:A; SPS101:a; CS201:B+; HIST191:D; CS204:B-; CS210:b+

Please enter the courses you have taken this semester with letter

grades: CS306:F; MATH203:C; HIST192:A; CS201:A-

Please enter the course you want to check: CS306

Your grade for CS306 is U.

#### Sample Run 10

Please enter the courses you have taken previously with letter

grades: MATH101:A; SPS101:B; CS201:b+; HIST191:D; CS204:B-; CS210:a-

Please enter the courses you have taken this semester with letter

grades: MATH203:d+;HIST192:A;CS201:A-;CS210:c-

Please enter the course you want to check: CS210

You can choose between S and C- for CS210.

# Sample Run 11

Please enter the courses you have taken previously with letter

grades: MATH101:A; SPS101:F; CS201:b+; HIST191:D; CS204:B-; CS210:a-

Please enter the courses you have taken this semester with letter

grades: SPS101:A; MATH203:d+; HIST192:A; CS201:A-; CS210:c-; PS101:F

Please enter the course you want to check: PS101

Your grade for PS101 is U.
